Services

CNC LASER CUTTING

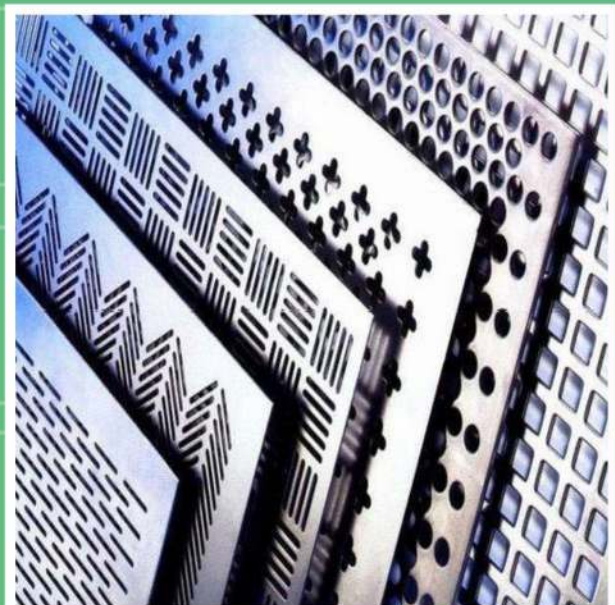

SHEET METAL FABRICATION

PRECISION ENGINEERING COMPONENTS

CNC Laser Cutting

We provide CNC laser cutting in copper, brass, aluminum, stainless steel and mild steel. Our services are extensively used to cut and fabricate different kinds of industrial parts using sheet metal of various thickness and sizes.

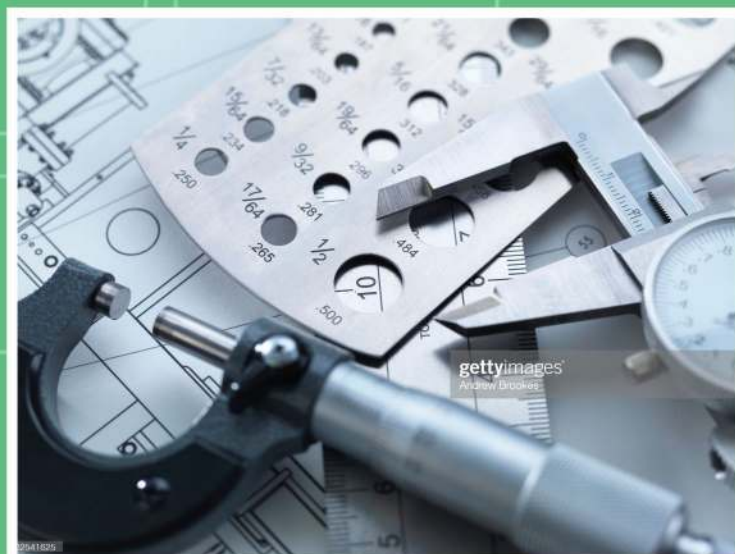

Sheet Metal Fabrication

We specialize in manufacturing parts and components for corresponding areas of industrial engineering applications. We employ various fabricating procedures comprising cutting, bending, forming, welding, assembly, deep drawing parts and finishing to manufacture a wide range of sheet metal products.

Precision Engineering Components

Each of the precision sheet metal components manufactured by us possesses a high degree of durability, performance and price competitiveness. We process through the latest designing, modeling, and programming software that molds the desired product as per the requirement.

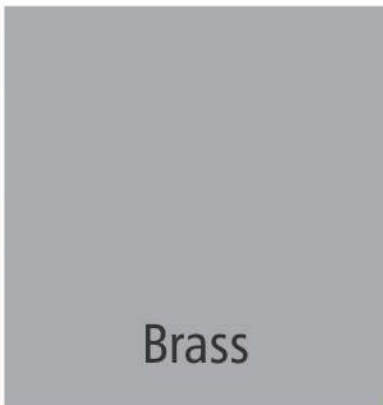

Materials

Aluminium

Brass

Copper

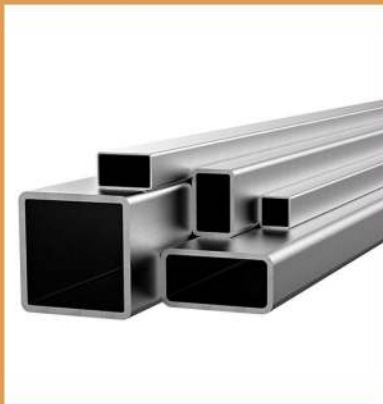

Stainless Steel

Mild Steel

Carbon Steel

Galvanized Steel

CNC LASER CUTTING MACHINE

1500 mm x 3000 mm
Cutting Capacity
10 mm
Carbon Steel.

CNC Press Brake

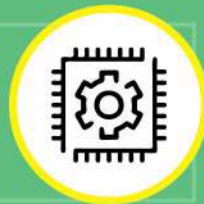

1500 mm x 3000 mm
110 Tones
Bending Capacity
8 mm Thick.

Why Bonsdag Industries

100% accurate
designing, cutting,
bending

Advanced technology
to deliver best in
class results

Cost effective
component
manufacturing

Trusted quality standards
since 4 decades

Less investment
on tooling

Fast delivery for
high volume quantities

We create what you demand.

BONSDAG Industries is a hub to all CNC Laser cutting, CNC Tube bending and precision sheet metal component requirements. At BONSDAG Industries, we offer a wide range of precision sheet metal components and best industrial laser cutting services and industrial sheet metal fabrication services. Each of the precision sheet metal components manufactured by us possesses a high degree of durability, performance and price competitiveness.

Provide accurate Machinery parts, Precision Metal components according to customer Drawings and specifications.

Latest designing, modeling, and programming software that molds the desired product as per the requirement.

Creating new possibilities for cost-effective component manufacturing Ensuring flawless end quality standards Using high tech machines, intricate and complicated shapes can be cut directly from a metal sheet or plate Less investment and time-saving in tooling for small Quantities or Volume Quantities.

We manufacture:

- All type of Textile machinery
- Automobiles Sheet metal parts
- Electrical Metal parts
- M.S. junction & panel boxes
- Interior and Architect cutting work
- Elevators & Conveyers
- Submersible pump & water pump
- Ball valve parts
- Pharmaceutical & packaging
- Filling machines
- Hardware and Sanitary parts
- Kitchen & Dairy equipment
- Stainless steel /mild steel utensils
- Electrical signaling and traffic control parts
- Agriculture elements and machinery
- Construction machinery & earth moving machinery
- Sheet metal fabrications work of all type engineering & Industrial applications in metals

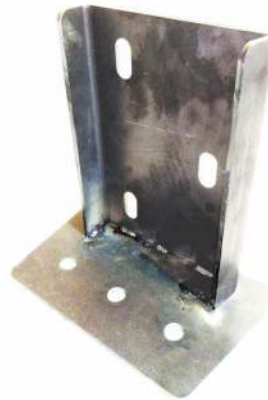

CNC Laser Cutting Product

Electric Panel Fabrications

Precision Sheet Metal Fabrication

Precision Engineering Components

Elevator Components

CNC Bending Work

Deep Drawing and Sheet Pressing Components
